Data Unit 2019 6-month Report

Community Overdose Action Team (COAT)

Period: January 1, 2019 through June 30, 2019

Montgomery County, Ohio

Community Overdose Action Team

Working Together To Combat Overdoses and Drug Abuse

Our goal is to reduce the number of fatal overdoses.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Data Unit Overview

With representatives from agencies across Montgomery County, the goal of the Data Unit is to enhance efforts to monitor drug use and drug-related morbidity and mortality. Activities include providing data to COAT branches, sharing data between agencies, updating members on data sources and activities, and producing a six month and annual Data Report.

COAT Data Sharing Unit Members:

Caresse Boyd - Public Health - Dayton & Montgomery County

Dr. Robert Carlson - Wright State University's Center for Interventions, Treatment, and Addictions Research (CITAR)

Lt. Matthew Dickey - Dayton Police Department

Shawn Dunlavy - Montgomery County

Dawn Ebron - Public Health - Dayton & Montgomery County

Josh Gratsch - Ascend Innovations Inc.

Susan Herzfeld - Public Health - Dayton & Montgomery County

Dr. Matthew Juhascik - Montgomery County Coroner's Office

Bruce Langos - Montgomery County Sheriff's Office

Dr. Sara Paton - Wright State University

Ashley Seybold - Public Health - Dayton & Montgomery County

Andrew Sokolnicki - Montgomery County ADAMHS

Bob Stoughton - Montgomery County/University of Dayton

Kyle Wallace - Public Health - Dayton & Montgomery County

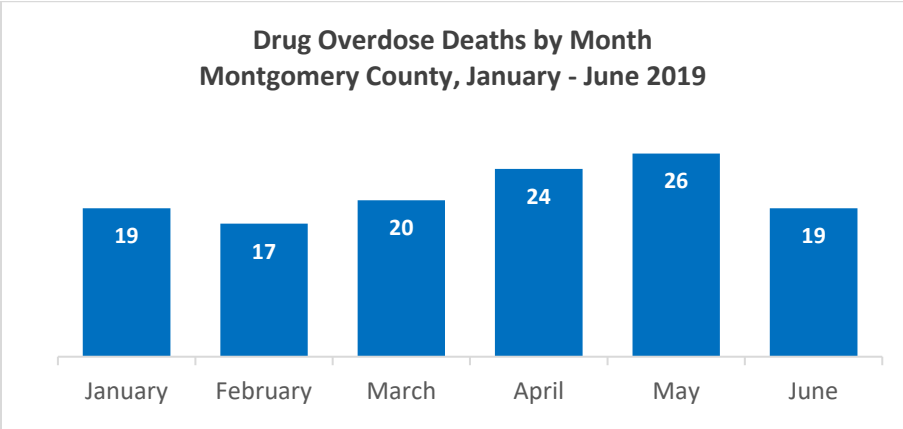
Drug Overdose Deaths

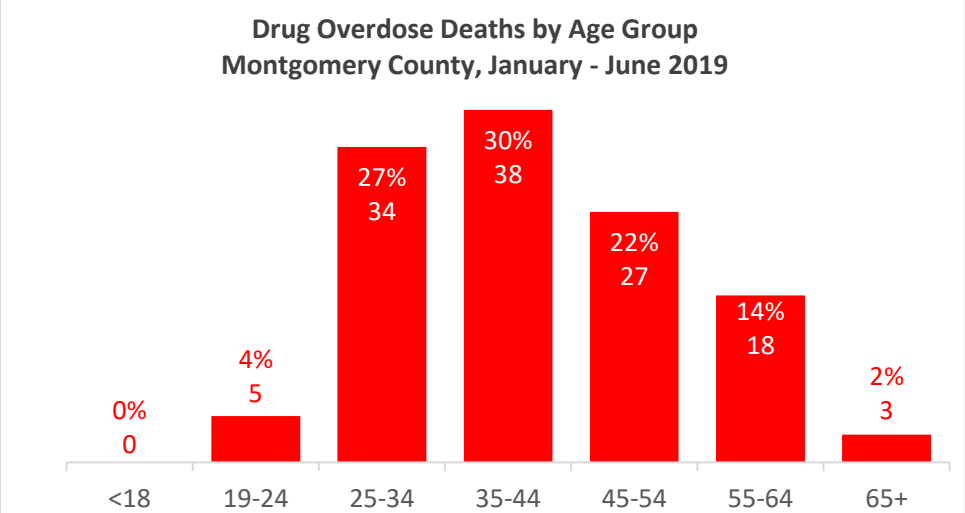
There were **125 confirmed drug overdose deaths** between January and June 2019; this is similar to the 127 deaths that occurred during the same period in 2018.

Drug overdose deaths in this report include residents and non-residents of Montgomery County who died in Montgomery County. This report does not include residents who died outside of Montgomery County. Overdose death data are provided by the Montgomery County Coroner's Office.

Overdose Deaths by Month



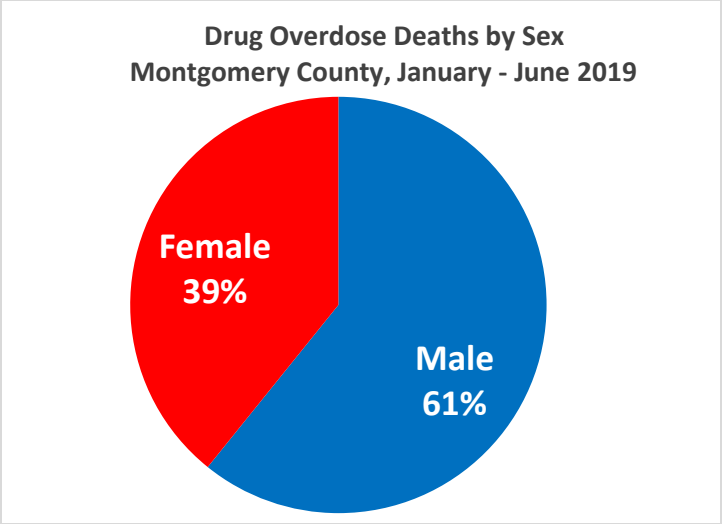
Demographics



*Due to rounding, percentages do not sum to 100%.

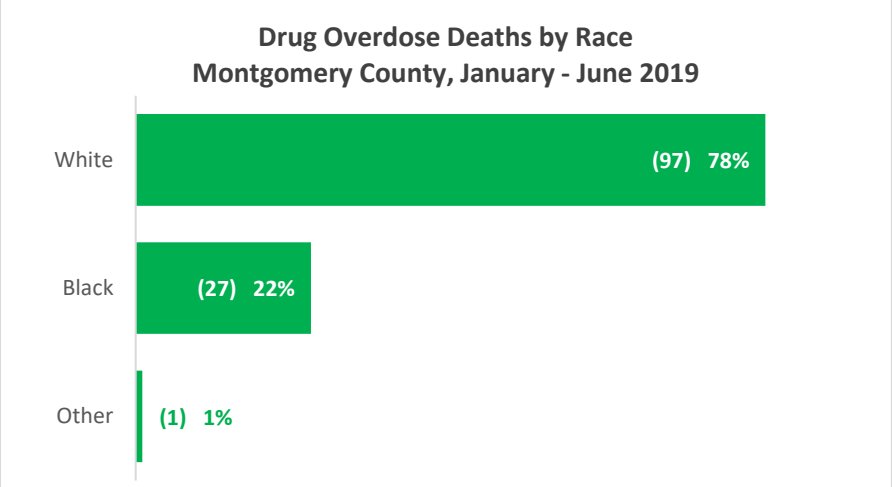
The highest percentage of drug overdose deaths occurred in the age group **35 to 44 years** (30%). Seventy-nine percent of drug overdose deaths occurred among individuals aged 25 to 54 years.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.



Thirty-nine percent (49 of 125) of individuals who died of a drug overdose were **female** and 61% (76 of 125) were **male**.

The **percent who were female has decreased**; between January and June of the prior year, females accounted for 46% (59 of 127) of drug overdose deaths.

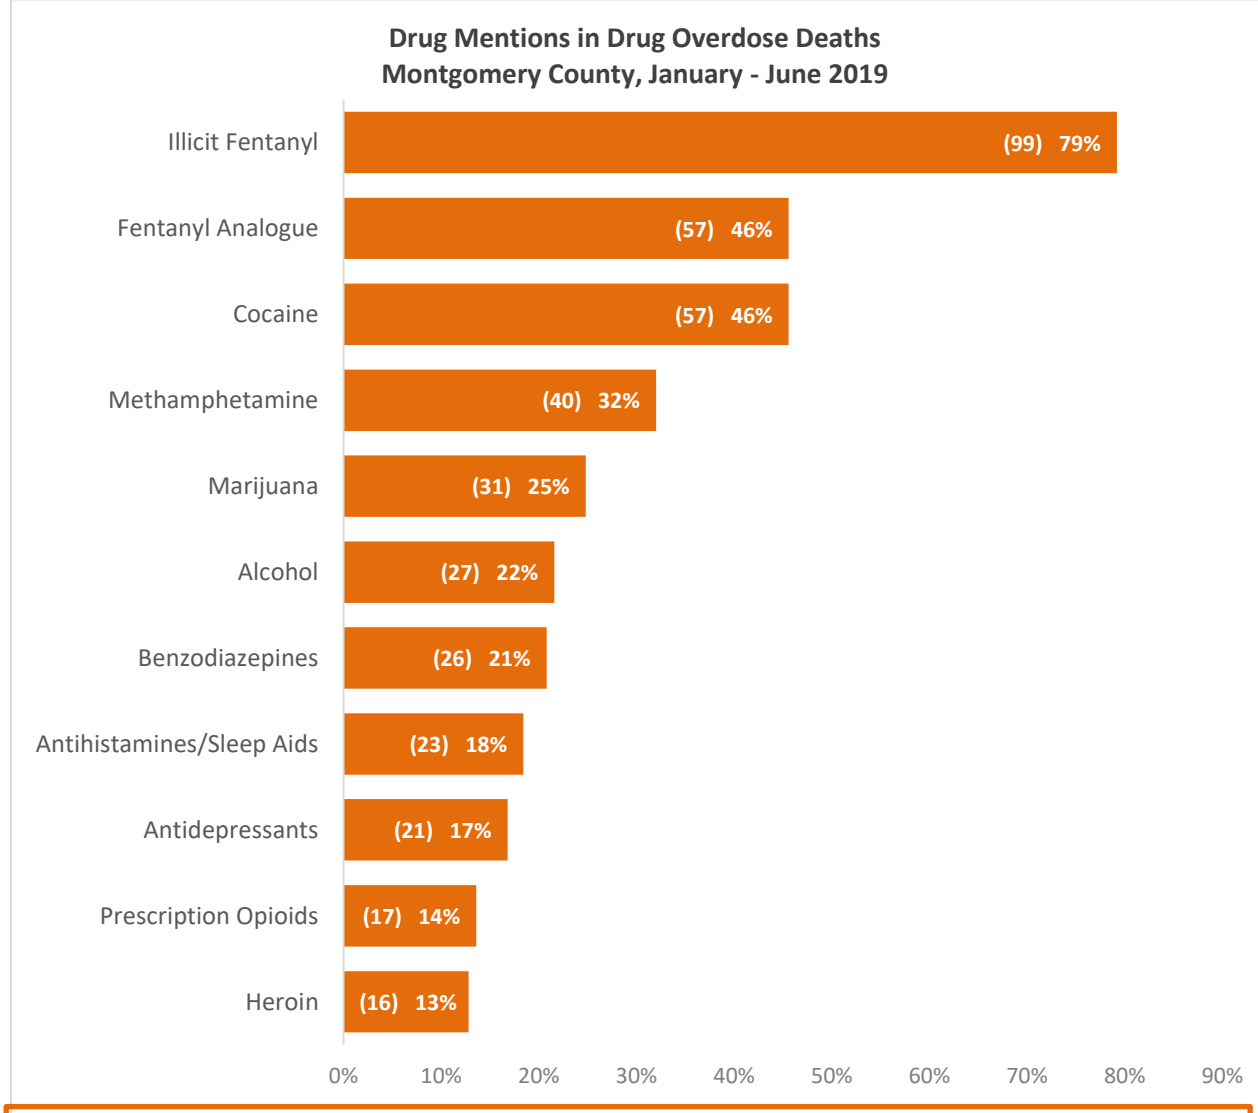


Whites accounted for seventy-eight percent of drug overdose deaths from January to June 2019. Twenty-seven (27) of the 125 drug overdose deaths were among **Blacks** (22% of the total). The ratio of White to Black drug overdose victims is 3.6, meaning for every Black person who died of a drug overdose, there were 3.6 White people who died of a drug overdose. From January to June 2018, this ratio was 3.5.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Drug Types

Definition of a Drug Mention
A drug "mention" means a specific drug was found in a bodily system of an individual who died, but the particular drug was not necessarily the sole cause of death. The presence of multiple drugs in a person's system can result in more than one mention for that individual.

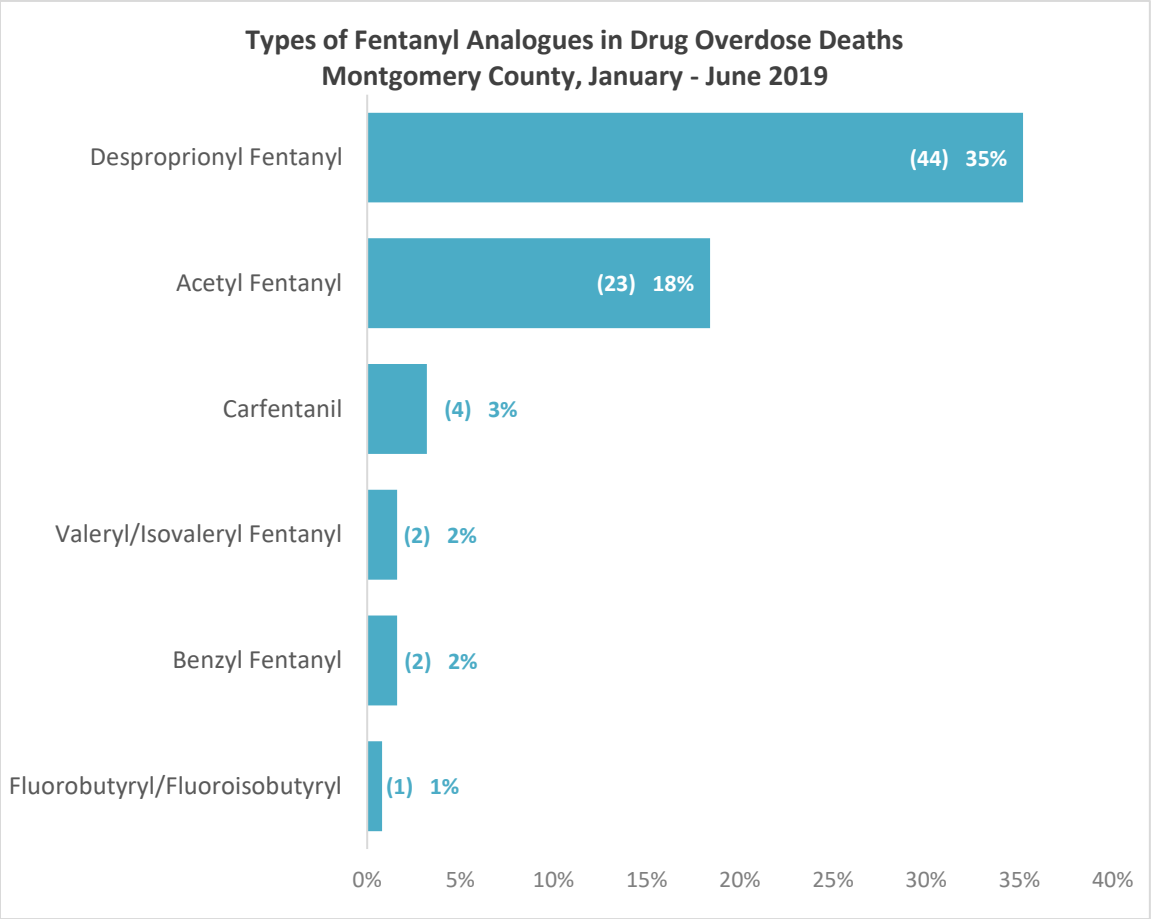


Of those who died from a drug overdose, 79% had **illicit fentanyl** in their system, the most common drug mention during the first six months of 2019. **Fentanyl analogues** (drugs with a similar chemical structure to fentanyl) and **cocaine** were the second and third most common drug mentions, each present in 46% of overdose deaths.

Methamphetamine increased from 24% between January and June of the prior year to 32% during the first half of 2019, while **cocaine remained stable** (43% from January to June 2018 and 46% between January and June 2019).

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Fentanyl Analogues



Desproprionyl fentanyl (found in 35% of deaths between January and June) was the most common fentanyl analogue found during drug overdose autopsies, followed by **acetyl fentanyl** (found in 18% of deaths).

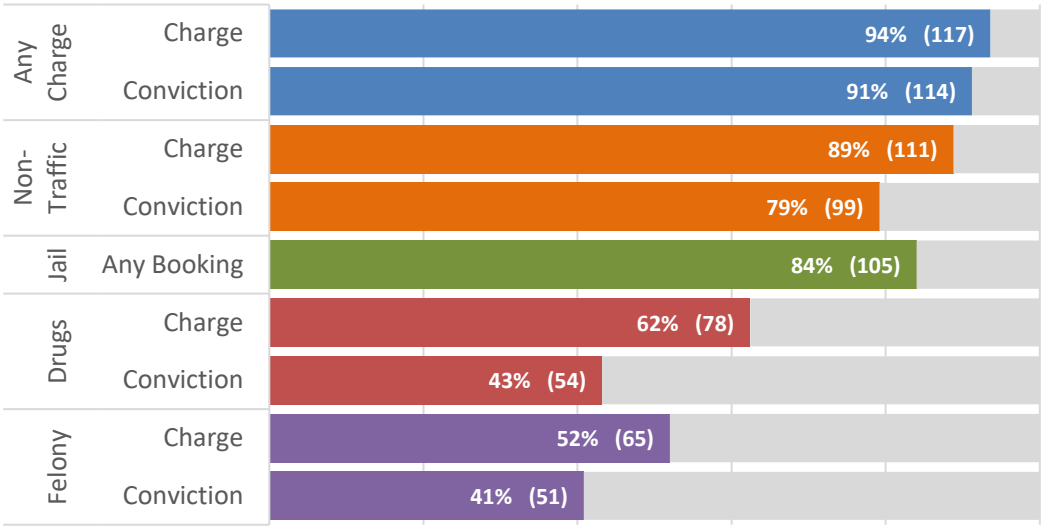
Carfentanil, the most common fentanyl analogue in 2017, was found in 3% of deaths in January through June 2019. This is a decline from January to June 2018, when carfentanil was present in 9% of overdose deaths.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Criminal History

This section presents law enforcement data on the individuals who died of a drug overdose in Montgomery County during January through June 2019. These data are collected from JusticeWeb, a portal that aggregates information from criminal justice agencies in and around Montgomery County. Note that not all agencies report data to JusticeWeb.

Lifetime Cases and Convictions in Overdose Deaths
Montgomery County, January - June 2019
(Includes data reported to JusticeWeb)



Of the 78 individuals with any drug-related charge, 69% (54) had more than one such charge.

Number of Lifetime Drug Charges in Overdose Deaths
Montgomery County, January – June 2019

Charges	Individuals	Percent
0	47	38%
1	24	19%
2	17	14%
3	13	10%

Days Between Law Enforcement Contact and Overdose Deaths
Montgomery County, January – June 2019

Time Between Last Contact and Death	Any Contact		Release From Jail		Drug Contact	
	117		105		78	
Time Period	**#**	**%**	**#**	**%**	**#**	**%**
Within 1 Year	71	61%	43	41%	30	38%
Within 1 Month	22	19%	12	11%	7	9%
Within 1 Week	10	9%	5	5%	3	4%

Note: Table includes all individuals who had contact during a listed time period. For example, "Within 1 Year" also includes individuals who had contact within one month and one week.

Of the 117 individuals with any prior contact with the criminal justice system, 61% (71) had such contact within **one year** of death; 19% (22) had contact within **one month** of death and 9% (10) had contact within **one week** of death.

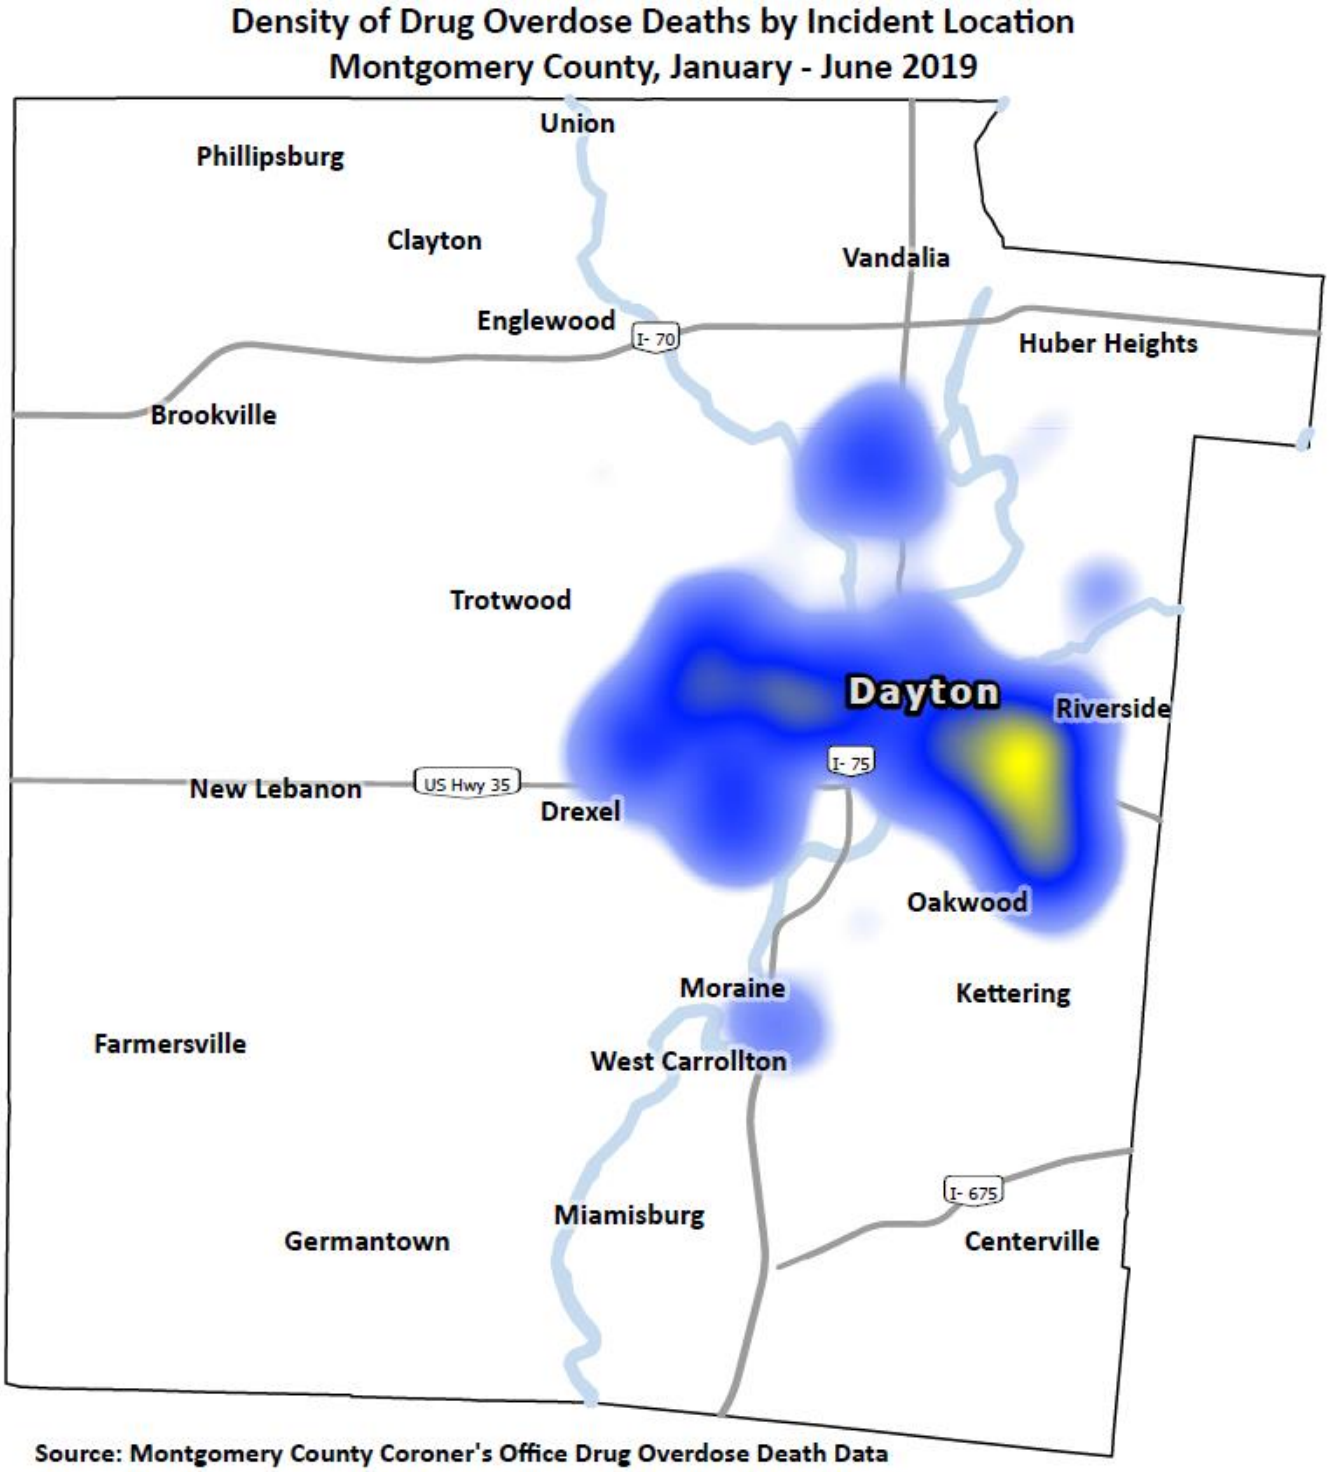
Prior Criminal Charges in Drug Overdose Deaths
Montgomery County, January – June 2019

Charges	Individuals	Percent
Drug Charges	78	62%
Robbery/Theft	54	43%
DUI	44	35%
Disorderly Conduct	41	33%
Domestic Violence	39	31%
Assault	39	31%
Public Intoxication	34	27%
Criminal Damaging	22	18%
Trespassing	20	16%
Menacing	19	15%
Fraud	18	14%
Open Container	17	14%

Sixty-two percent (78 of 125) of individuals who died of an overdose had a prior **Drug Charge**. The next most common criminal charges were **Robbery/Theft** (43%), **DUI** (35%), **Disorderly Conduct** (33%) **Domestic Violence** (31%), **Assault** (31%), and **Public Intoxication** (27%).

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Incident Location



This map shows areas with a high density of incident locations for drug overdose deaths. The largest cluster appears in **East Dayton**.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Drug Overdose Emergency Department Visits

Data regarding drug overdose emergency department visits come from EpiCenter, Ohio's syndromic surveillance system. Drug-related visits were counted as overdoses if descriptions specifically stated the terms "OD" or "overdose." References to suicidal ideations or intentional self-harm, or to everyday drugs such as Tylenol or insulin, excluded drug-related visits from overdose counts. Numbers in this section represent an estimate and may not reflect the true number of drug overdoses due to variability in visit descriptions and the inconsistent use of ICD codes.

Emergency Department Visits by County

Top 10 Ohio Counties with the Highest Number of Overdose Emergency Department visits by Home Location January – June 2019		
Rank	**County**	**Number of Visits**
	All of Ohio	12,902
1	Franklin	1,592
2	Cuyahoga	1,314

7	Montgomery	172.0
8	Huron	167.5
9	Fayette	163.5
10	Mahoning	147.5

Montgomery County ranks **5th** (of 88 counties) for the **highest number** of drug overdose (OD) visits to emergency departments (ED) and **7th** (of 88 counties) for the **highest rate** of such visits. This rate is a **decrease** from January through June 2018, when Montgomery County had 265.3 visits per 100,000 residents.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Emergency Department Visits by Montgomery County Residents

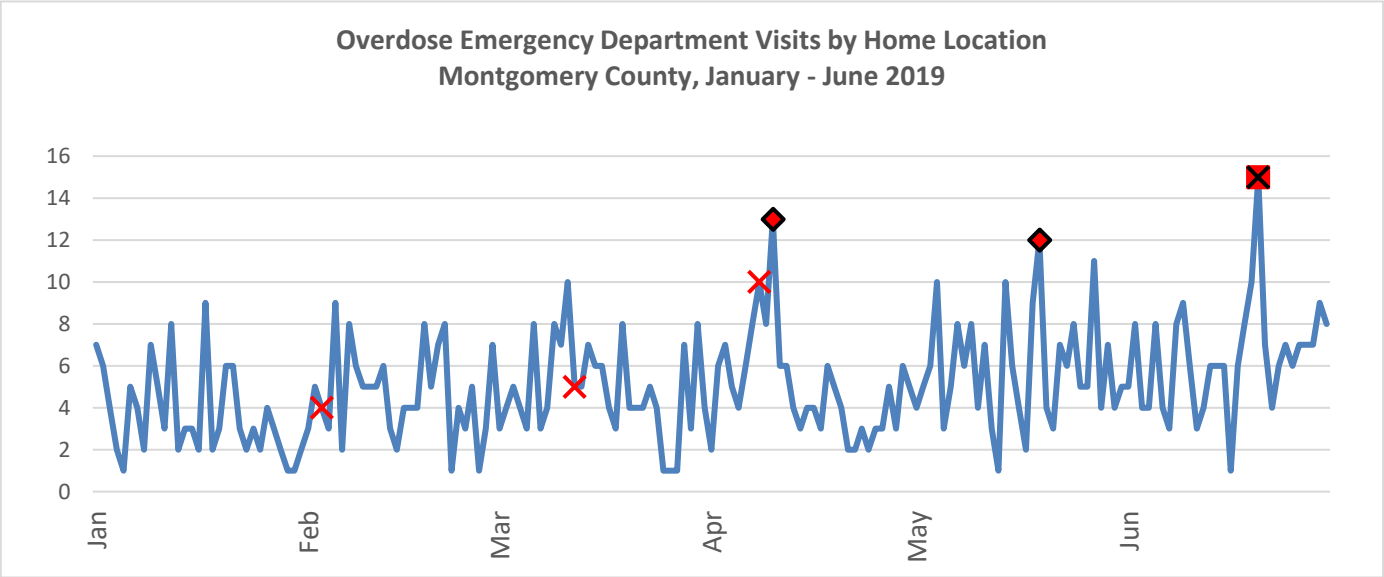
Visits by Day and Month

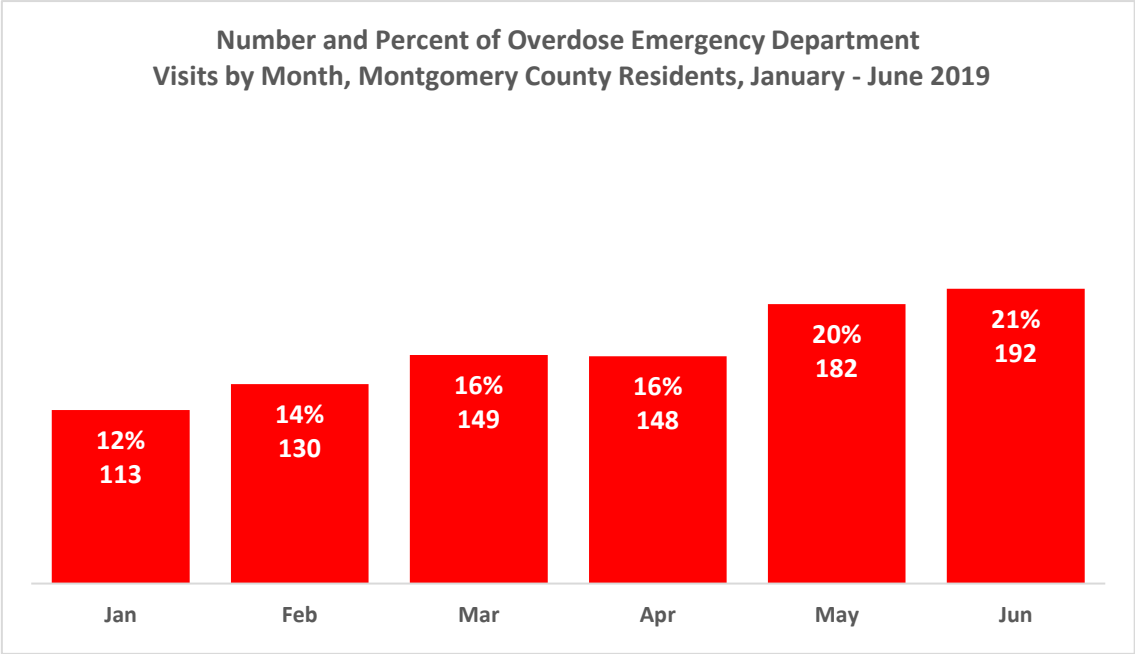
◆ =Top 3 peak for # of visits in 1 day

X=EpiCenter anomaly

X=EpiCenter anomaly & peak

An **anomaly** is an alert generated by the system when the number of visits exceeds the threshold. The **threshold** is a value determined by the system based on historical data, above which is considered unusually high.





During January to June 2019, there were 914 overdose ED visits made by Montgomery County residents.

This is an average of 5.1 visits per day.

There were 4 incidents in which the predicted and threshold values for the number of Montgomery County resident drug-related ED visits were breached (indicated by 'X' mark in the figure above), triggering an anomaly by the system. There were two additional anomalies issued when looking at visits by facility location (not shown in chart).

The number of visits steadily increased throughout the first quarter and continued to increase in the second quarter with a high of 192 visits in June (21% of visits in January to June 2019). In 2018, the month with the highest number of overdose visits was August with 200 visits.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Visits by Facility

Hospital and County of Overdose Emergency Department Visits
Montgomery County Residents, January – June 2019

Grand Total	914	100%	

Miami Valley Hospital had the highest percentage of Montgomery County resident overdose visits to their Emergency Department (39% of all visits). Eight percent (8.0% or 73 visits) of Montgomery County resident overdose ED visits were made to hospitals outside of Montgomery County.

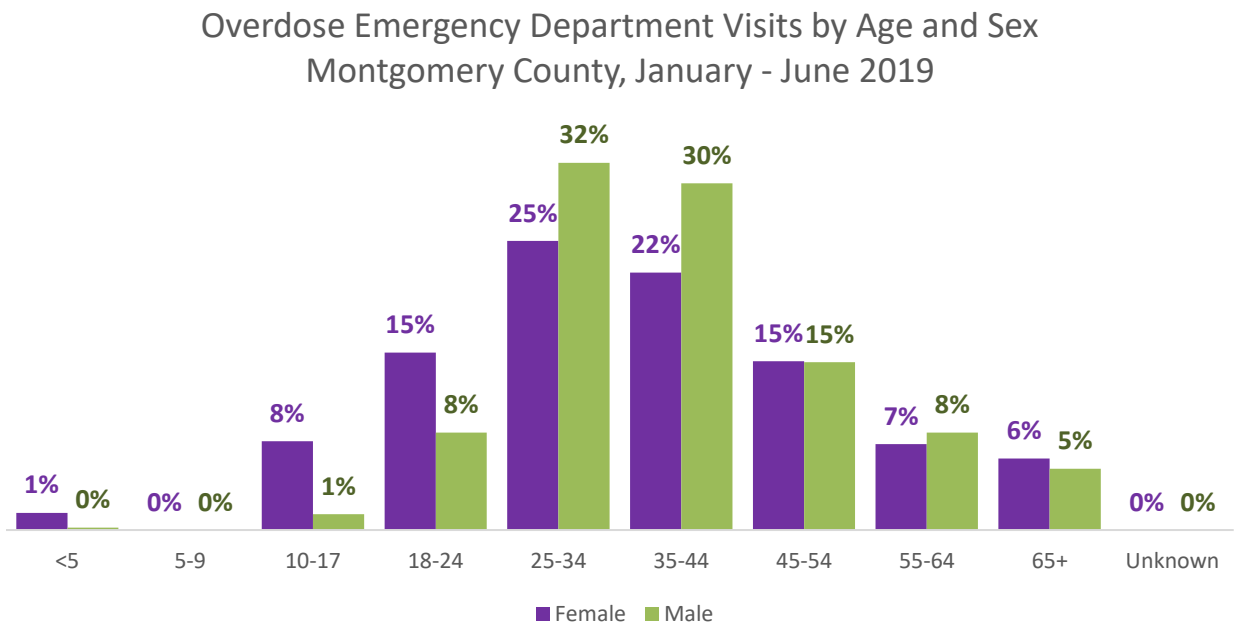
This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Overdose Emergency Department Visits per Patient
Montgomery County Residents, January – June 2019

# of Visits	# of Patients	Percent
1	773	92.4%
2	55	6.6%
3	7	0.8%
4	0	0.0%
5	2	0.2%
Total	837	100%

There was a total of 837 Montgomery County residents who visited an ED for a drug overdose in the first half of 2019 for a total of 914 visits. Of the 837 residents, 64 (7.6%) visited an ED for an overdose more than once.

Age and Sex



Fifty-six (56%) percent of overdose ED visits were **male**, 44% were female. Patients ages **25 to 54** years accounted for 70% of overdose ED visits in January to June 2019. Female patients (average age 37.2 years) tended to be younger than male patients (average age 40.1 years); 25% (99 of 404) of female patients were younger than 25 years of age, while 10% (51 of 510) of male patients were younger than 25.

Drug Seizure

Law Enforcement Drug Seizures and Forfeitures

The Regional Agencies Narcotics and Gun Enforcement (R.A.N.G.E.) Task Force includes twelve law enforcement agencies in Montgomery and Clark Counties and works to combat drug abuse and trafficking.

Miami Valley Bulk Smuggling Task Force includes nine agencies who operate a tip line and intercept smuggled drugs in the Dayton Area.

Dayton Police Department's (DPD) Narcotics Bureau drug seizures are also listed below.

Regional Agencies Narcotics and Gun Enforcement (R.A.N.G.E.) Task Force Drug Seizures January – June 2019

Drug	Jan-Mar	Apr-Jun	Total
Cocaine/Crack (grams)	655	358	1,013

Drugs Seized

Drugs seized by law enforcement provide a snapshot of drugs present in the community. Between January and June of 2019, the Miami Valley Bulk Smuggling Task Force, R.A.N.G.E., and Dayton Police Department's Narcotics Bureau seized a combined 227,800 grams of Marijuana, 24,633 grams of Methamphetamine, 20,761 grams of Heroin and Fentanyl, and 10,417 grams of Cocaine and Crack Cocaine.

Seizures of Methamphetamine, Heroin/Fentanyl, and cocaine and crack cocaine have decreased compared to the second half of 2018. The number of grams of marijuana seized has increased since the first quarter of 2018.

Drug Seizures by Half-Year, 2017 – June 2019

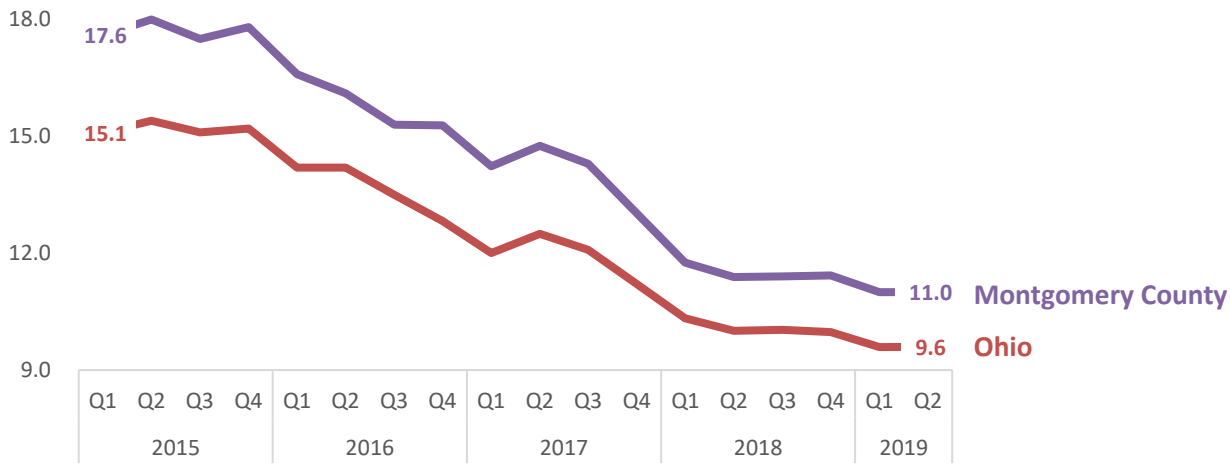
Prescription Opioids

Prescriptions by Quarter

Ohio Automated Rx Reporting System (OARRS)

The Ohio Automated Rx Reporting System (OARRS) allows prescribers and pharmacies to monitor opioid prescriptions and address overprescribing and "doctor shopping" in the state of Ohio. The charts below represent the number of doses dispensed per capita; this is the total number of doses sold to patients at pharmacies divided by the total population.

Opioid Doses Dispensed per Capita
Montgomery County and Ohio; January 2015 - June 2019



Between 2015 and June 2019, the rate of opioids dispensed per capita was **higher in Montgomery County** than in the State of Ohio. The number of Opioid doses dispensed per capita has **decreased** consistently since 2015 in both Montgomery County and Ohio, with a **slight increase in Quarter 2 of 2017** for both the state and county.

This document contains sensitive data and was created by the Department of Epidemiology at PHDMC.

Treatment

Through Montgomery County's Alcohol and Drug Continuum of Care Expansion, opiate overdose patients at local emergency departments who have been medically cleared can be referred to Samaritan Behavioral Health, Inc (SBHI). If the patient requests immediate treatment, they have an Opiate Intervention Services (OIS) intake appointment and discuss treatment options with SBHI nursing staff. Patients may also self-refer to OIS.

If the patient accepts a treatment option, they enter one of the four programs listed below. If they do not accept treatment at this point, they receive a follow-up call from OIS staff within 48 hours. Information on patients treated, as well as those who refused treatment, is presented below. Treatment data provided by Alcohol, Drug Addiction & Mental Health Services (ADAMHS)

Opiate Intervention Services (OIS) Treatment Options	
Treatment Option	**Information**
Residential Treatment	Providers include: Nova House, Beckett Springs, Morningstar, Access Hospital, Woodhaven, and Women's Recovery Center
Sub-acute detoxification	Suboxone/Subutex/Methadone Out-patient Treatment; Multiple Providers, including Promise to Hope, Miami Valley Hospital
Ambulatory detoxification	Withdrawal Management- Vivitrol injections at Samaritan Behavioral Health
Outpatient intake appointment	Required if opiate treatment is ruled out and it is determined treatment for a different drug of addiction or mental health diagnosis is necessary. Scheduled within 48 hours.

Opiate Intervention Services Contacts, Intake Appointments and Outcomes, January - June 2019	
	Jan-Jun
Total OIS Phone Contacts/Inquiries	**234**
Denied OIS due to Benzo use or Medical Issues	**1**
Intake Appointments	**145**
Residential Treatment	**50**
Sub-Acute Detox	**32**
Ambulatory Detox	**30**
Received Information	**2**
Declined Referral to Services	**3**
Declined due to Benzo use or Medical Issues	**3**
No Referral (other reasons)	**25**

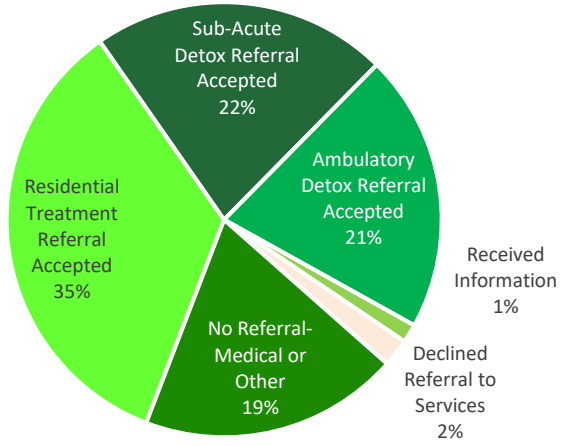
Outcome of Opiate Intervention Services Intake Appointment, January - June 2019



In January to June 2019, OIS had **234 phone contacts** or inquiries and **145 in-person** intake/walk-in appointments. Of the 145 appointments, 21% (30) accepted referrals to **Ambulatory Detox**, 34% (50) to **Residential Treatment**, and 22% (32) to **Sub-Acute Detox**. Two percent (3) declined referral to services at the appointment and 19% (28) did not receive a referral because of benzo use, medical issues, or other reasons.

Of the 112 patients accepting referral to services, **74% (83) were given appointments within 48 hours**. Follow-up contact was attempted within seven days with those who accepted referrals to services and provided telephone numbers but who failed to attend treatment.
